

There are two folders in the **output\_samples** -

1. **Forward-cycle(LDR-HDR-LDR)**: This folder contains the input LDR image and the corresponding output HDR and then the LDR images in the forward cycle of our cycle consistency pipeline.
2. **Backward-cycle(HDR-LDR-HDR)**: This folder contains the input HDR image and the corresponding output LDR and then the HDR images in the backward cycle of our cycle consistency pipeline.

**Note:** The output/input HDR images (in **.hdr** format) generated by our pipeline can be viewed using [OpenHDRViewer](#).
